

Cool new features

DOMINO 8.5 READY

Support for Domino 8

SecurTrac 2.3 also supports the latest major release of IBM Lotus Notes and Domino, including support for Domino 32 Bit and 64 Bit versions.

SecurTrac plug-in for Lotus Notes 8

New plug-in allows users to search and retrieve SecurTrac audit trail logs from within the sidebar of the Lotus Notes 8 client.

User Activity Monitor

Use this new feature to monitor user activities such as: Database open and close. View open, Document open, create, update and delete actions.

Monitor Database Agents

A new feature added to the Database Monitor which logs database Agent activities on the Domino Server.

Customizable e-mail notifications

E-mail notification content is now customizable and a delivery priority can also be configured (user defined).

Document deletions

The SecurTrac log will show whether or not the document was a "soft" or "hard" deletion.

Enhanced statistics and reports

SecurTrac 2.3 can now generate enhanced statistics for different log types. The data can be exported to Excel and presented graphically with a single click. In addition, a new SecurTrac log summary report can be scheduled to run daily/weekly/monthly, and the Database ACL audit report, now calculates and shows the effective access for specified users or groups.

Log to a remote server

With the option to log detected events to a remote SecurTrac server, you can now store all SecurTrac logs on one central server.

Improved log database management

The Administrator can specify to purge or rollover the SecurTrac log database based on size or time.

Easily restore deleted or updated documents, design elements or ACL

A new option has been added in the Database /Domino Directory monitor to export the original document/design element/ACL into a DXL format. From the SecurTrac log, the administrator can rollback deleted or modified documents/design element/ACL back to the version that is stored in the SecurTrac log document.

ACL Monitor

New to the Mail, Database and Domino Directory ACL monitor, is the option to show complete ACL entries in addition to the changed entries.

New Server Settings view

A new Server Settings view to monitor all SecurTrac enabled servers at a glance.

New Server Settings document

All SecurTrac parameters can now be configured in the new SecurTrac server settings document. Previously, all parameters had to be set in the Notes.ini. For a complete listing of all the new features and enhancements available in SecurTrac 2.3, please visit us online.
